TECHNICAL & LOCAL REAL ESTATE SEARCH DIAGNOSTIC

SEO & Website Technical Audit: Tavola Realty

Target Domain: tavolarealty.com | **Stack:** WordPress + Elementor + Yoast v28.8 + Kestrel IDX | **HQ:** Chicago, IL

1. Executive Summary & Architecture Overview

Tavola Realty operates a Chicago residential and investment real estate brokerage website built on WordPress, Elementor, Yoast SEO v28.8, and iHomefinder Kestrel IDX. The site features strong foundational assets—including 15+ individual agent profile pages (`/team/...`) and structured neighborhood guides (`/neighbor/...`).

However, Google Rich Results testing and DOM inspection reveal severe structured data pollution (39 `Event` items on the homepage with zero `RealEstateAgent` schema), missing `<h1>` tags on neighborhood landing pages, 29 render-blocking stylesheets per page, broken `tel:` links, and static `0` market trend counters.

Audit Pillar	Severity	Diagnostic Finding & Search Impact
Structured Data Pollution	**Critical**	Rich Results Test detects `Breadcrumbs (1)` and `Events (39)` with warnings, while completely omitting `RealEstateAgent` and `Organization` schema.
Neighborhood Semantics	**High**	Neighborhood templates (e.g., `/neighbor/forest-park/`) contain no `<h1>` tag and display static zeroes (`0K` , `0` , `$0B` , `0+`) in market stats.
Technical & DOM Bloat	**High**	29 external CSS stylesheets per page; navigation menu with 15+ nested agent links is duplicated 3 times in DOM; broken `about:invalid#zCSafez` phone anchors.
Brand & Media Hygiene	**Moderate**	Homepage title starts with `Home -` ; header/footer logos lack `alt` text; footer YouTube link points to `@Tavolagroup` ; global footer omits street address.

2. Critical Technical & Structured Data Findings

A. Homepage Schema Pollution (39 Events vs. Zero RealEstateAgent Schema)

Google Rich Results testing of `https://tavolarealty.com/` shows 40 valid items detected: `Breadcrumbs (1)` and `Events (39)` (with non-critical warnings). An embedded IDX open-house or calendar feed is injecting 39 `Event` schema blocks into the homepage while leaving the brokerage itself completely undefined.

- **Remediation:** Disable automatic `Event` schema injection on the homepage IDX widget, deploy the `RealEstateAgent` JSON-LD blueprint below (linking to `https://tavola.group/#organization`), and reserve `RealEstateListing` schema for individual MLS property detail pages.

B. Broken Telephone Links, Dead Anchors & Elementor Bloat

- **Invalid Phone Links:** Both the global footer and the home valuation widget render `<a href="about:invalid#zCSafez">312-380-0636</a>` instead of `href="tel:+13123800636"`, breaking click-to-call tracking and mobile usability.
- **Triple Navigation & 29 CSS Files:** Every page loads 29 separate stylesheets and renders three full copies of the header navigation (including all 15 agent submenu links repeated three times), degrading Interaction to Next Paint (INP) on mobile devices.
- **Missing Image Alt Text & Dead Join Link:** Header and footer brand logos (`image-35-1024x170.png`) have empty `alt=""` attributes, and the mobile drawer contains a dead `<a href="#">Join</a>` anchor.

3. On-Page SEO & Neighborhood Silo Optimization

Template / Element	Current State	Recommended Optimization
Homepage Title Tag	`Home - Tavola Realty | Chicago Real Estate & Homes for Sale`	Remove the generic `Home -` prefix: `Tavola Realty | Chicago Real Estate Brokerage & Homes for Sale`.
Neighborhood H1s (`/neighbor/*`)	Uses `<h3>Explore</h3>` and `<h2>Forest Park</h2>`; page has zero `<h1>` tags.	Promote neighborhood title to `<h1>Forest Park, IL Real Estate & Homes for Sale</h1>` across all neighborhood templates.
Market Trend Counters	Raw HTML outputs `0K`, `0`, `$0B`, and `0+` prior to scroll animation.	Render real MLS neighborhood figures directly in server HTML so Google indexes accurate market statistics.
Global Footer NAP	Displays `312-380-0636` without the physical street address.	Include `939 W North Ave, Suite 750, Chicago, IL 60642` in the global footer to match your verified Google Business Profile.

> **Kestrel IDX Crawl Management:** Ensure faceted MLS search parameter URLs generated by `kestrel.idxhome.com` use clean canonical tags pointing to static neighborhood hubs (`/neighbor/*`) so thousands of filter combinations do not dilute crawl budget.

4. Recommended JSON-LD Entity Schema

Deploy this `RealEstateAgent` JSON-LD script in the global `<head>` to establish Tavola Realty's local entity, unique Chicago phone line, and parent relationship with Tavola Group.

```
<script type="application/ld+json">
{
  "@context": "https://schema.org",
  "@type": "RealEstateAgent",
  "@id": "https://www.tavolarealty.com/#organization",
  "name": "Tavola Realty",
  "url": "https://www.tavolarealty.com/",
  "telephone": "+1-312-380-0636",
  "parentOrganization": {
    "@type": "Organization",
    "@id": "https://tavola.group/#organization",
    "name": "Tavola Group",
    "url": "https://tavola.group/"
  },
  "address": {
    "@type": "PostalAddress",
    "streetAddress": "939 W North Ave, Suite 750",
    "addressLocality": "Chicago",
    "addressRegion": "IL",
    "postalCode": "60642",
    "addressCountry": "US"
  },
  "areaServed": [
    { "@type": "City", "name": "Chicago" },
    { "@type": "City", "name": "Forest Park" }
  ],
  "sameAs": [
    "https://instagram.com/tavolarealty/",
    "https://www.linkedin.com/company/tavola-realty/"
  ]
}
</script>
```

5. Prioritized 30-Day Implementation Roadmap

Timeline	Focus Area	Actionable Engineering & Content Tasks
Week 1	Schema & Broken Links	Remove the 39 homepage `Event` schema blocks; deploy `RealEstateAgent` JSON-LD; replace all `about:invalid#zCSafez` anchors with `tel:+13123800636`; remove `Home -` from homepage title.
Week 2	Neighborhood Templates	Convert `/neighbor/*` titles from `<h2>` to `<h1>`; replace static `0` counters with real MLS market figures; remove duplicate *Discover Your Home's True Value* form heading.
Weeks 3–4	Core Web Vitals & IDX	Consolidate the 29 external CSS stylesheets via caching/minification; eliminate triple-duplicated navigation menus; add descriptive `alt` attributes to logos; audit IDX canonical rules.
